🏛 EDUCATION

Islamic University of Technology (IUT)-OIC

Dhaka, Bangladesh

BSc. in Electrical and Electronic Engineering

2022 – 2026

CGPA: 3.94/4.00

Class Position: 6th out of 166

🔬 RESEARCH EXPERIENCE

Undergraduate Thesis

2025 – Present

- **Title:** DCA-DQG: Decentralized Context-Aware Dynamic Quantized Gossip for Communication-Efficient Traffic-State Estimation in Highway V2V Networks
- **Supervisor:** Prof. Dr. Mohammad Tawhid Kawser
- **Area/Field:** V2X Networks; Distributed Consensus; Dynamic Quantization
- **Description:** Developing communication-efficient distributed consensus algorithms for V2X networks using dynamic quantization and context-aware optimization for traffic-state estimation in highway V2V networks.

Independent Research Collaboration

2025 – Present

- **Area/Field:** RIS; Adaptive Modulation and Coding; Reinforcement Learning; Distributed Consensus
- **Description:** Conducted collaborative research on robust RIS beam selection using domain-adversarial learning and RL-driven adaptive modulation, coding, and resource scheduling for wireless networks; additionally worked on learning-driven adaptive and quantized gossip consensus for communication-constrained and smart-grid networks.
- **Outcome:** Contributed to five IEEE conference papers across these research areas.

SELECTED PROJECTS

5G System-Level Simulation and Performance Analysis

Documentation: [View Report](#)

- **Tools Used:** Vienna 5G Simulator, MATLAB
- **Objective:** Analyze user mobility, scheduling, feedback mechanisms, and link adaptation in a 5G system-level simulation.
- **Analysis:** Evaluated the impact of CQI feedback delay on throughput, effective SINR, feedback penalty, and BLER performance.

Wireless Channel Modeling and Analysis using NYUSIM

Documentation: [View Report](#)

- **Tools Used:** NYUSIM
- **Objective:** Model and analyze millimeter-wave Non-Line-of-Sight (NLOS) wireless channels under different antenna and propagation configurations.
- **Analysis:** Evaluated AOA, AOD, Power Delay Profile (PDP), received power, delay spread, and path loss.

Microwave MIMO Antenna Design and Optimization

Documentation: [View Report](#)

- **Objective:** Design and optimize a 2-element MIMO microstrip patch antenna operating at 6.9 GHz.
- **Design:** Implemented impedance matching, feed optimization, and Defected Ground Structure (DGS) to improve antenna isolation and performance.
- **Analysis:** Evaluated S-parameters, radiation characteristics, surface current distribution, and Envelope Correlation Coefficient (ECC).

SKILLS

AWARDS & HONORS

- **Premium Technology Paper Award, i-ETC 2026** – for *Learning-Driven Quantized Gossip Consensus via UCB Multi-Armed Bandits in Semi-Regular MGML Networks*.
- **University Honors List** – CGPA above 3.75.
- **OIC Merit-Based Scholarship** – USD 14,000 merit scholarship.
